1) Basic Information:

	Student ID	Student Name
Group Details	190103020028	Eftakhar Ahmed Arnob
	190103020026	Ehtimam Rashed Chowdhury
	190203020101	Farzana Rahman
Project Title	ReachMe – More Than A Social Media	

2) User Roles:

User Types	Description
Unregistered User	An unregistered user can't view or interact with private of privacy selected contents. But he can only view public contents like photos, videos, posts etc. without interaction. Along with that some user only features will be unavailable for him.
Registered User	Can access almost all contents and features like creating post, uploading video, uploading photo, Up vote – Down vote and comment on contents, send – receive friend requests, message with other users, report contents if something seems inappropriate to him etc.
Verified User	When a registered user meets the criteria of becoming a verified user, he can submit required documents to the authority (Super Admin) for his profile verification. If Super Admin approves the documents, then he becomes an Officially Verified User. Advantage of being a verified user is that, his profile and contents will contain a signature of authentication badge.
Moderator	User reported contents are firstly submitted to moderators. Moderators have the privilege to judge user reported contents or any contents of the platform. And if they find any inappropriate thing, they can delete the entire content. If a user keeps posting inappropriate contents, moderator can submit a "Account Restriction Request" to the admin against the user. If a moderator fails to judge a content, he can post a "Judgement Token" of that content to the admin.
Admin	An Admin have all privileges of a moderator. Along with that Admins have the additional privilege to

		delete, edit, or modify part of the user content or the full content if needed. Based on "Account Restriction Request" from moderator, he can also restrict user accounts or delete/ban the user from site. If an admin fails to make decision, he can submit a "Admin Request" about the problem to the Super Admin. Also an admin can create new moderators for the site and promote user contents.
	Super Admin	Super Admin have all privileges of an admin along with that he can create new admin, moderators for the site. Super Admin's another most significant role is to verify a registered user account. Verification here does not mean email verification or anything like that. Super Admin can verify user accounts based on their submitted document, if he finds these documents right then he can give the user an "Officially Verified User Badge" and it will be shown on their profile and posts as a signature of authentication. Note: Giving such a verification means the entire site is partially responsible if a verified user posts something inappropriate.

3) User Story Planning:

Task Number	User Stories	Responsible	Deadlines
A - 1	The homepage of the site will contain latest public contents along with a pop up for logging in or registering an account. After logging in, the homepage will show personalized contents for the user.		
A - 2	An unregistered user can only view public contents and can't interact with anything in the website.		
E - 1	An unregistered user can register for an account with a valid email address. After verifying the email address with the provided link, he will be able to login to the created account.		
E - 2	A registered user can update/modify his account information such as email address, username, name, password, profession, date of birth, blood group, address etc. Also he can delete his account if he wants to.		
F - 1	A registered user can search for a content with proper keywords from the search bar situated on the upper-left corner of the homepage header.		
F - 2	A registered user can navigate to different type of contents using the navigation menu situated on the middle of the homepage header.		

A - 3	A registered user can post their contents (text, image, video) on the site and it will be visible on their own profile and to the users of his friend list. If the content post's privacy is public, then it will be visible to all.		
A - 4	A registered user can tag his friends and set privacy of his posts.		
A - 5	A registered user can update or delete his post/content.		
E - 3	A registered user can send friend request to another user or can receive friend requests from others. By accepting friend request, they can add each other to their friend list.		
F - 3	A registered user can send text messages to another user when the receiver is in his friend list.		
E - 4	A registered user can interact with another user's content via up vote, down vote, comment etc.		
F - 4	A registered user can create a disaster alert. After being approved by moderators or admins, the alert will be pushed as a notification to all users who lives in the nearest area.		
A - 6	A registered user can create a blood seeking post, other users with the required blood group who lives in a specific range to the seeking user, will get an alert notification.		
E - 5	A registered user can share another user's post on his own timeline.		
F - 5	A registered user can apply for "Official Verified User Badge" if his profile meets minimum criteria and has valid documents. In this case he has to submit the documents to the super admin.		
E - 6	A registered user will get one "Penalty Flag" each time one of his content gets recognized inappropriate by moderators. All the "Penalty Flags" will be added together and be visible to moderators and admins.		
F - 6	A moderator can view user reported contents and delete the content if necessary.		
A - 7	A moderator can report a user profile to admins for restriction if the user keeps posting inappropriate contents repeatedly. Usually a user profile is reported for restriction if there are more than 3 penalty flags on his profile.		
F - 7	A moderator can submit a "Judgement Token" about a user reported content to admin if he fails to judge the content.		
E - 7	An admin have all privileges of a moderator.		
A - 8	An admin can appoint new moderators to the site.		
E - 8	An admin can delete, edit or modify part of a user content if necessary.		

Story Number	User Story	Acceptance Tests
F - 8	An admin can restrict or ban/delete a user account based on moderator report if necessary.	
F - 9	An admin can submit an "Admin Request" to the super admin if he fails to make any decision about something.	
A - 9	A super admin have all privileges of an admin.	
E - 9	A super admin can verify a user account based on his submitted documents. After verification, the user will be given a "Official Verified User Badge" by the super admin.	

4) The Product Backlog:

Story Number	User Story	Acceptance Tests
	The homepage of the site will contain latest public contents along with a pop up for logging in or registering an account. After logging in, the homepage will show personalized contents for the user.	
	An unregistered user can only view public contents and can't interact with anything in the website.

	A super admin can verify a user account based on his submitted documents. After verification, the user will be given a "Official Verified User Badge" by the super admin.	

5) The Sprint Backlog:

Story Number	User Story	Sprint Items
	The homepage of the site will contain latest public contents along with a pop up for logging in or registering an account. After logging in, the homepage will show personalized contents for the user.	Create a search bar on the top-left of the homepage.
		Create navigation tabs on the top middle of homepage.
		Create profile shortcut, user menu, message, notification and logout shortcut buttons on the top-right of the homepage.
		Divide the homepage body into 3 vertical sub sections. The first(left) section contains promotional contents of the site. The middle section contains user's personalized contents and the right section contains notification/alert type contents.
	An unregistered user can only view public contents and can't interact with anything in the website.	Show username "Guest" on profile shortcut of homepage.
	An unregistered user can register for an account with a valid email address. After verifying the email address with the provided link, he will be able to login to the created account.	Clicking profile shortcut will redirect to another page containing two options – Login or Register.
		Clicking login option will redirect to the login page.
		Clicking register option will redirect to the registration page. Create a script to generate a unique verification link which will be sent via email to the user's email address that he used to register account. Clicking the verification link will activate his account.
	A registered user can update/modify his account information such as email address, username, name,	After logging in, user will have 2 options on the user menu. One is for Updating the profile. Clicking that option will lead to a profile update page.

	password, profession, date of birth, blood group, address etc. Also he can delete his account if he wants to.	Another option will be for deleting the account permanently. Username and password is required to delete the account permanently.
	A registered user can search for a content with proper keywords from the search bar situated on the upper-left corner of the homepage header.	Searching with a keyword will show two types of results. One is the search results list of contents that contains the certain search string/keyword.
		Another is the list of profiles whose First Name or Last Name contains the searched keyword.
	A registered user can navigate to different type of contents using the navigation menu situated on the middle of the homepage header.	Create a navigation bar on the homepage that will have 4 options. The first one is a combined contents list that contains text type, image type and video type posts by users and system.
		The second option is only for text type contents.
		The third option is only for image type contents.
		The fourth one is for only video type contents.
	A registered user can post their contents (text, image, video) on the site and it will be visible on their own profile and to the users of his friend list. If the content post's privacy is public, then it will be visible to all.	Create a system from where user can select his content category and add media files (if selected) to the post/content.
		Create a file handling system which will store and maintain user uploaded files(image or video).
	A registered user can tag his friends and set privacy of his posts.	Create a system that enables user to tag other users from his friend list.
		Create a scrip that will allow user to set privacy(public or friends only) to their each content separately.
	A registered user can update or delete his post/content.	Create a script and page from where user can update/edit or delete his content.
	A registered user can send friend request to another user or can receive friend requests from others. By accepting friend request, they can add each other to their friend list.	Crate a system so that users can send and receive friend requests from other users.
		Create a system that will allow a user to accept or delete a friend request that he received. Accepting the request will add the user to his friend list.
	A registered user can send text messages to another user when the receiver is in his friend list.	Create a text messaging system so that users within friend list can send texts to each other privately.
		Create a script that will refresh the inbox when the user receives a new message.

	A registered user can interact with another user's content via up vote, down vote, comment etc.	Create an up vote – down vote ranking system which will be used to count the total number of up vote on the content. Total up votes = user up votes – user down votes.
	A registered user can create a disaster alert. After being approved by moderators or admins, the alert will be pushed as a notification to all users who lives in the nearest area.	Create a disaster or emergency alert system that will push notification to every users who have nearby or similar address.
		Create a script that will hold the alert post to be approved by an admin or moderator.
	A registered user can create a blood seeking post, other users with the required blood group who lives in a specific range to the seeking user, will get an alert notification.	Create a system that will send an alert to all users who have the same blood group and lives nearby.
	A registered user can share another user's post on his own timeline.	Create a system that allows an user to share another user's content/post to his own timeline.
	A registered user can apply for "Official Verified User Badge" if his profile meets minimum criteria and has valid documents. In this case he has to submit the documents to the super admin.	Create a system to submit documents directly to the super admin from users when they meet the minimum criteria to apply for a verified user badge.
	A registered user will get one "Penalty Flag" each time one of his content gets recognized inappropriate by moderators. All the "Penalty Flags" will be added together and be visible to moderators and admins.	Create a script that counts penalty flags of a user and show the flag count to the moderators or admins.
	A moderator can view user reported contents and delete the content if necessary.	Create a moderator panel from where a moderator can see a list of user reported content and delete or keep them.
	A moderator can report a user profile to admins for restriction if the user keeps posting inappropriate contents repeatedly. Usually a user profile is reported for restriction if there are more than 3 penalty flags on his profile.	Create a script so that a moderator can report a user to admins for restricting or ban his account.
	A moderator can submit a "Judgement Token" about a user reported content to admin if he fails to judge the content.	Create a script by which a moderator can pass the user reported content to admins for judgement if he fails to do so.

	An admin have all privileges of a moderator.	Create a script that adds all moderator permissions to the admins.
	An admin can appoint new moderators to the site.	Create a script that allows an admin to create new moderator accounts.
	An admin can delete, edit or modify part of a user content if necessary.	Create a system so that admins can partially modify user contents.
	An admin can restrict or ban/delete a user account based on moderator report if necessary.	Create a script by which an admin can delete a user account and all his contents.
	An admin can submit an "Admin Request" to the super admin if he fails to make any decision about something.	Create a script that allows an admin to send an issue to the super admin for judgement or decision making privately.
	A super admin have all privileges of an admin.	Create a script that adds all admin permissions to the super admin.
	A super admin can verify a user account based on his submitted documents. After verification, the user will be given a "Official Verified User Badge" by the super admin.	Create a system from where super admin can see a list of pending verification requests from users.
		Create a script that allows super admin to view the submitted documents and profile statistics of a verification requested user.
		Create a script that allows super admin to approve verification or reject based on statistics and documents of the user.
